Interfaces \ INote

INote Interface

Allows access to a Note.

.NET Syntax

Visual Basic (Declaration)

Public Interface INote

C#

public interface INote

JavaScript

Object dsNote

COM native C++

interface INote

C++

class dsNote_c

Example

COM native C++

If the selected object is an INote object, then get the object.

```
...
//Write number of selected objects to output file
long selCount = dsSelManager->GetSelectedObjectCount( dsSelectionSetType_Current );
strPrint.Format( L"Selected objects: (%d):\r\n", selCount );
fileOutput.WriteString( strPrint );

if( selCount > 0 )
{
    for( long i = 0; i < selCount; ++i )
    {
        //Get selected object type
        dsObjectType_e retObjType;
        IDispatchPtr selObj = dsSelManager->GetSelectedObject( dsSelectionSetType_Current, i, &retObjType );
        //If selected object is an Note entity
        if(dsNoteType == retObjType )
        {
            INote Ptr dsNote( selObj );
            strPrint.Format( L"Note\r\n" );
            fileOutput.WriteString( strPrint );

            //Do dump for Note entity
            //See the entity's Layer, LineScale, LineStyle, LineWeight,
            //or Visible property for the DumpGraphicsEntity template
            CAddinDumpManager::DumpGraphicsEntity( INote Ptr>( dsNote, fileOutput );
        }
    }
}
...
```

Example

- Insert Notes (C#)
- Insert Notes (VB.NET)
- Insert Notes (VBA)
- Insert Notes with Parameters (C#)
- Insert Notes with Parameters (VB.NET)
- Insert Notes with Parameters (VBA)
- Insert Block, Notes, and Sketch Entities (JavaScript)

Accessors

- IDocument::GetObjectByHandle
- ILeader::GetNoteAnnotation
- ISelectionManager::GetSelectedObject
- ISelectionManager::GetSelectedObjects
- ISketchManager::GetEntities
- ISketchManager::InsertNote
- ISketchManager::InsertNoteWithParameters
