Manager.

Description

Gets the active sketch.

Gets or sets whether sketch entities are added directly to the SOLIDWORKS database.

Obsolete. Superseded by ISldWorks::GetUserPreferenceToggle **or** ISldWorks::SetUserPreferenceToggle **and** swUserPreferenceToggle_e.swSketchInference.

Gets or sets whether SOLIDWORKS automatically solves the sketch geometry of the part while creating it.

Gets or sets the scaling factor by which to adjust the density of the curvature combs for this spline.

Gets or sets the scaling factor by which to adjust the size of the curvature combs for this spline.

Gets or sets whether new sketch entities are immediately displayed when created.

[Gets the document for this ISketchManager object.](#)

Obsolete. Superseded by ISldWorks::GetUserPreferenceToggle **or** ISldWorks::SetUserPreferenceToggle **and** swUserPreferenceToggle_e.swSketchInference.

Description

Projects and displays along the x axis a dimension between selected points in a 3D sketch.

Projects and displays along the y axis a dimension between selected points in a 3D sketch.

Projects and displays along the z axis a dimension between selected points in a 3D sketch.

[Not implemented. Use ISketchManager::SketchUseEdge2.](#)

Creates a 3-point arc.

Creates a 3-point center rectangle at any angle.

Creates a 3-point corner rectangle at any angle.

Creates an arc based on a center point, a start point, an end point, and a direction.

Creates area hatch/fill boundary hatches using closed sketch profiles.

Creates a center line between the specified points.

Creates a center rectangle.

Creates a chamfer between two selected sketch entities.

Creates a circle based on a center point and a point on the circle.

Creates a circle based on a center point and a specified radius.

Creates circular sketch pattern.

Creates a conic curve in the active sketch.

Sets selected sketch segments to be construction geometry instead of sketch geometry.

Creates a corner rectangle.

Creates an ellipse using the specified center, major-axis, and minor-axis points.

Creates a partial ellipse given a center point, two points that specify the major and minor axis, and two points that define the elliptical start and end points.

[Obsolete. Superseded by ISketchManager::CreateEquationSpline2.](#)

Creates an equation-driven 2D explicit or parametric curve or a 3D parametric curve.

Creates a sketch fillet using the selected sketch entities.

Creates a sketch line in the currently active 2D or 3D sketch.

Creates a linear sketch pattern.

Creates a parabola in the active sketch.

Creates a parallelogram.

Creates a sketch point in the active 2D or 3D sketch.

Creates a polygon in the active sketch.

Creates an area hatch/fill region hatch using a closed sketch profile.

Creates a sketch belt feature.

Creates a 3D sketch plane.

Creates a sketch slot.

[Obsolete. Superseded by ISketchManager::CreateSpline2.](#)

[Obsolete. Superseded by ISketchManager::CreateSpline3.](#)

Creates either a 2D spline or a spline constrained to a surface.

Creates a B-curve from B-spline data; that is, a set of B-spline vertices (control points) and a knot vector.

Creates an empty spline parameter data object.

[Obsolete. Superseded by ISketchManager::CreateSplinesByEqnParams2.](#)

Creates one or more spline segments using the B-curve parameters provided.

Creates a tangent arc.

Edits a circular sketch pattern.

Edits a linear sketch pattern.

Puts the block definition in edit mode.

Saves or discards your edits of the block and then ends the current editing session of this block.

Explodes the specified block instance.

Fully defines a sketch.

Gets whether dynamic sketch mirroring, which is the automatic mirroring of newly created sketch entities about a selected centerline, is enabled.

Gets the number of block definitions in the model.

Gets all of the block definitions.

[Obsolete. Superseded by ISketchManager::ICreateSpline2.](#)

Creates a spline passing through the given points.

Creates a B-curve from B-spline data; that is, a set of B-spline vertices (control points) and a knot vector.

Creates one or more spline segments using the B-curve parameters provided.

Gets all of the block definitions.

Inserts a new 3D sketch in a model or closes the active sketch.

Inserts or closes an explode line sketch in an exploded view.

Inserts a new sketch in the current part or assembly document.

Inserts a block instance at the specified location using the block definition.

[Obsolete. Superseded by ISketchManager::InsertSketchPicture2.](#)

Inserts a picture on the current drawing sketch.

Creates a sketched intersection curve.

Creates a block definition using the specified file.

Creates a block definition at the specified location from the selected entities.

Creates a block definition at the specified location using all of the sketch entities in the active sketch.

Creates a sketch path using the selected entities.

Draws a 3-point perimeter arc.

Reverses the end point tangent direction of splines and arcs.

Rotates, and optionally copies, the selected 3D sketch entities about the specified vector.

Rotates, and optionally copies, the selected 3D sketch entities about the specified x, y, and z coordinates.

Enables or disables dynamic sketch mirroring, which is the automatic mirroring of newly created sketch entities about a selected centerline.

Sets the options for the grid.

Adds to the length of the selected sketch entity (i.e., line, centerline, or arc) to meet the nearest sketch entity.

[Obsolete. Superseded by ISketchManager::SketchOffset2.](#)

Offsets the selected sketch entities.

[Obsolete. Superseded by ISketchManager::SketchReplace2.](#)

Replaces a sketch entity in a model with another sketch entity, preserving all references.

Trims the selected sketch entities.

[Obsolete. Superseded by ISketchManager::SketchUseEdge2.](#)

[Obsolete. Superseded by ISketchManager::SketchUseEdge3.](#)

Creates sketch entities on a sketch plane by projecting selected edges, loops, faces, curves, and external sketch

Splits the selected closed sketch segment into two sketch segments.

Splits the selected open sketch segment into two sketch segments.
