Flash an Add-in's Toolbar Button Example (VBA)

This example shows how to flash an add-in's CommandManager-style toolbar button, similar to what you see in many of the SOLIDWORKS online tutorials.

NOTE: The first example shows how to flash an add-in's CommandManager-style toolbar button using the ISwHtmlInterface interface. The second example shows how to do this using both the ISwHtmlInterface and ISldWorks interfaces.

Example 1

```
'-----  
'  
' Preconditions: SOLIDWORKS is running and  
'           the Fastening Feature toolbar is visible.  
'  
' Postconditions: Each time you click the Continue button in the  
'           Microsoft Visual Basic IDE, a different toolbar button on the  
'           Fastening Feature toolbar flashes and that button's  
'           tooltip is displayed.  
'  
'-----  
  
Option Explicit  
  
Dim swApp As Object  
Dim newButtonID As Long  
Dim flashCommands As Long  
Dim userId As Long  
  
Sub main()  
  
Set swApp = CreateObject("SwHtmlControl.SwHtmlInterface.14")  
For userId = 40712 To 40715 'Currently bound IDs for each button on the Fastening Feature toolbar  
    newButtonID = swApp.GetCommandID("{65F06ACE-ED12-47FA-AB16-DB6ADE842AB5}", userId)  
    flashCommands = "" + CStr(newButtonID) + ""  
    swApp.ShowBubbleTooltip newButtonID, flashCommands, 0, "", ""  
    Stop  
Next  
  
End Sub
```

Example 2

```
'-----  
'
```

```
' Preconditions: SOLIDWORKS is running and
'         the Fastening Feature toolbar is visible.
'
' Postconditions: Each time you click the Continue button in the
'         Microsoft Visual Basic IDE, a different toolbar button on the
'         Fastening Feature toolbar flashes and that button's
'         tooltip is displayed.
'
```

```
'-----
```

Option Explicit

Dim swHTMLInt As Object

Dim swApp As Object

Dim newButtonID As Long

Dim flashCommands As Long

Dim userID As Long

Sub main()

Set swApp = Application.SldWorks

Set swHTMLInt = CreateObject("SwHtmlControl.SwHtmlInterface.14")

For userID = 40712 To 40715 'Currently bound IDs for each button on the Fastening Feature toolbar

 newButtonID = swHTMLInt.**GetCommandID**("{65F06ACE-ED12-47FA-AB16-DB6ADE842AB5}", userID)

 flashCommands = "" + CStr(newButtonID) + ""

 swApp.**ShowBubbleTooltip** newButtonID, flashCommands, 0, "", ""

 Stop

Next

End Sub

Show Bubble ToolTip Example (VBA)

This example shows how to display a Bubble ToolTip.

```
'-----  
'  
' Preconditions: HTML file exists at the specified location.  
'  
' Postconditions: Contents of the HTML file are displayed in a Bubble ToolTip.  
'  
'-----  
  
Option Explicit  
Public Enum swArrowPosition_e  
    swArrowLeftTop = 0  
    swArrowLeftBottom = 1  
    swArrowRightTop = 2  
    swArrowRightBottom = 3  
    swArrowUpTopLeft = 4  
    swArrowUpTopRight = 5  
    swArrowDownBottomLeft = 6  
    swArrowDownBottomRight = 7  
    swArrowLeftOrRightTop = 8  
    swArrowLeftOrRightBottom = 9  
    swArrowLeftOrRight = 10  
    swArrowUpOrDownLeft = 11  
    swArrowUpOrDownRight = 12  
    swArrowUpOrDown = 13  
    swArrowNone = 14  
    swArrowUnknown = 15  
End Enum  
  
Sub main()  
    Const sURLpath As String = "D:/Samples/Sample_QuickTips.html"  
  
    Dim pSldWorks As Object  
    Set pSldWorks = CreateObject("SwHtmlControl.SwHtmlInterface")  
    pSldWorks.ShowBubbleToolTipAt 300, 400, swArrowLeftTop, "Sample Bubble ToolTip", "Message of Sample Bubble ToolTip", sURLpath  
End Sub  
  
'-----
```
